Create a kafka topic named `atscale`, 2 partitions and replication factor 1

To create a Kafka topic named "atscale" with 2 partitions and a replication factor of 1, you can use the following command in your Kafka broker's terminal:

css

Copy code

```
./kafka-topics.sh --create --bootstrap-server localhost:9092 --replication-factor :
```

This assumes that you have already started your Kafka broker and have the ``kafka-topics.sh`` script in your PATH. The ``localhost:9092`` argument is the address and port of your Kafka broker. If your broker is running on a different host or port, you will need to adjust this argument accordingly.

List all topics

To list all the topics in a Kafka cluster, you can use the following command in your Kafka broker's terminal:

css

Copy code

```
./kafka-topics.sh --list --bootstrap-server localhost:9092
```

This assumes that you have already started your Kafka broker and have the ``kafka-`
